ORIENTED FILM

**Make an impact on your business with the lightest, strongest hand-wrapping film available**

Discover how **GaleWrap IMPACT Oriented Film** outperforms all other pre-stretched wraps on the market. Our patented film, made through a unique Inline Orientation Process (IOP), impacts the integrity and condition of your pallets all the way to your customer—and impacts savings all the way to your bottom line.

## COMPARE THE IMPACT

- **Super strong**—with a 60-70 gauge performance equivalent, IMPACT rolls are 50% stronger than other pre-stretched films of equal weight
- **Puncture resistant**—unique oriented molecules are cross-directionally formed, providing superior puncture protection
- **Incredibly light**—heavy rolls can cause injuries...an IMPACT roll is significantly lighter than conventional 70-gauge film rolls
- **No wasted film (or money!)**—our 110% guarantee: you can use the entire roll to the core... a bonus for the environment *and* your bottom line
- **Easy to use**—hemmed edges ease film separation from the next layer for a no-hassle start every time... no nicked edges
- **No training necessary**—to get started, simply grab a roll and “tug & snug” on the corners... the film will do the rest!
- **Economical, environmentally friendly packaging**—192 bulk-packed 15” x 2000” rolls per pallet... no corrugated boxes

**Get better protection for the product on your pallets and greater bottom-line savings for your company...**
